DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With regard to claim 1 it is unclear how the temporary storage area and the main memory are related. It is assumed that the temporary storage area is a part of the main memory because the first, second, and third buffer areas are in the main memory. The processes described in the second paragraph of claim 1 that use the temporary storage area, are also interpreted to utilize the buffers described in the third paragraph, but there is no explicit linking of the temporary storage area and the three buffers. Please clarify the relationships between the main memory, temporary storage area, and the first, second, and third buffers.

With regard to claim 6, the same discussion of claim 1 applies. Please clarify the relationships between the main memory, temporary storage area, and the first, second, and third buffers.

Claims not mentioned specifically depend from indefinite claims

Allowable Subject Matter

Claims 1-7 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is an examiner's statement of reasons for allowance:

With regard to claim 1, U.S. Patent 6,400,849 to Lee et al. discloses multiple processors for use in image processing. Lee discloses that these processors can be configured to perform both single pixel and multiple pixel processing lines 20-42. Lee also discloses that the processors can be configured to operate in parallel or in a pipeline, but he does not teach or fairly suggest the particular process steps of the present invention. The claimed invention explicitly calls for an image to be split and one part of the image being processed in both the single and multiple pixel processing sections and then stored in a buffer. The other part of the image is processed first in the single pixel processing section and then stored in a buffer and then processed in the multiple pixel processing section and then stored in another buffer. The two processed images are then recombined to form one image. While Lee suggests parallel and pipeline operations and single and multiple pixel processing, he does not teach or fairly suggest the steps in which the process of the claimed invention is performed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art

Other prior art considered relevant but not relied upon is as follows:

U.S. Patent 5,892,851 to Nguyen discloses separating an image into portions, performing image processing and then merging the image to reform the original image size.

U.S. Patent 6,370,279 to Paik discloses dividing an image performing multiple and single pixel operations on the images portions and then combining the processed image portions again.
